

Data Sheet: Features / Accessories

At a glance

- Innovative LECHUZA sub-irrigation system
- High-quality, shatterproof material made of polypropylene
- Removable and interchangeable plant liners
- Integrated overflow function
- Wide range of accessories: coasters, trellis, pedestals, hanging and mounting systems
- Plant substrate with slow-release nutrients: LECHUZA-PON

Get the most out of your plants without all the work

LECHUZA planters have an extraordinary design, but they also come equipped with some very impressive and intelligent features. The proven LECHUZA sub-irrigation system provides plants with moisture and nutrients for up to twelve weeks – depending on location and size – while a host of practical details keep plant care to a minimum even for the most demanding plants. This saves you time and energy. For example, all planters feature removable planter liners, which make it simple to exchange or replace plantings anytime without heavy lifting or moving, even in large planters. This is especially practical for changing and properly storing summer and winter plantings. Many LECHUZA planters have optional coasters that virtually disappear under the planter so that even potted planters can be effortlessly moved from one place to another. LECHUZA-PON – a pure mineral plant substrate for indoor and outdoor potted plants – offers yet another advantage in plant care. It consists of pumice, zeolites and volcanic rock and also includes a slow-release fertilizer, which is effective for six to twelve months. LECHUZA-PON is the perfect complement to conventional potting soil – especially when used in combination with the LECHUZA sub-irrigation system.

Functional accessories:

- Coasters for various models
- Mounting system for BALCONERA
- NIDO hanger (included)
- Trellis and pedestals for TRIO
- Plant substrate LECHUZA-PON
